

# Assignment 1

## What is Power BI Desktop?

Power BI Desktop is the free version of Power BI that you can install on your local computer as a program, and acts as a companion desktop application to the full version of Power BI. If you need to consolidate your data sources, create your own reports and conduct your own analysis or test it's capabilities, it's the perfect version to start with for all skill levels - whether you're non-IT and want to make your reports more interactive, or analysts seeking richer detail, it's one of the best business analytics tools to use.

*An example of the Power BI Desktop report canvas, viewing an IT spend dashboard.*

Despite its free nature, you may be surprised at what Microsoft has included with Power BI Desktop:

- You can connect and import data from over 70 cloud-based and on-premises sources
- The same rich visualisations and filters from Power BI Pro
- Auto-detect that finds and creates data relationships between tables and formats
- Export your reports to CSV, Microsoft Excel, Microsoft PowerPoint and PDF
- Python support
- Save, upload and publish your reports to the Web and the full Power BI service
- Storage limit of 10 GB per user

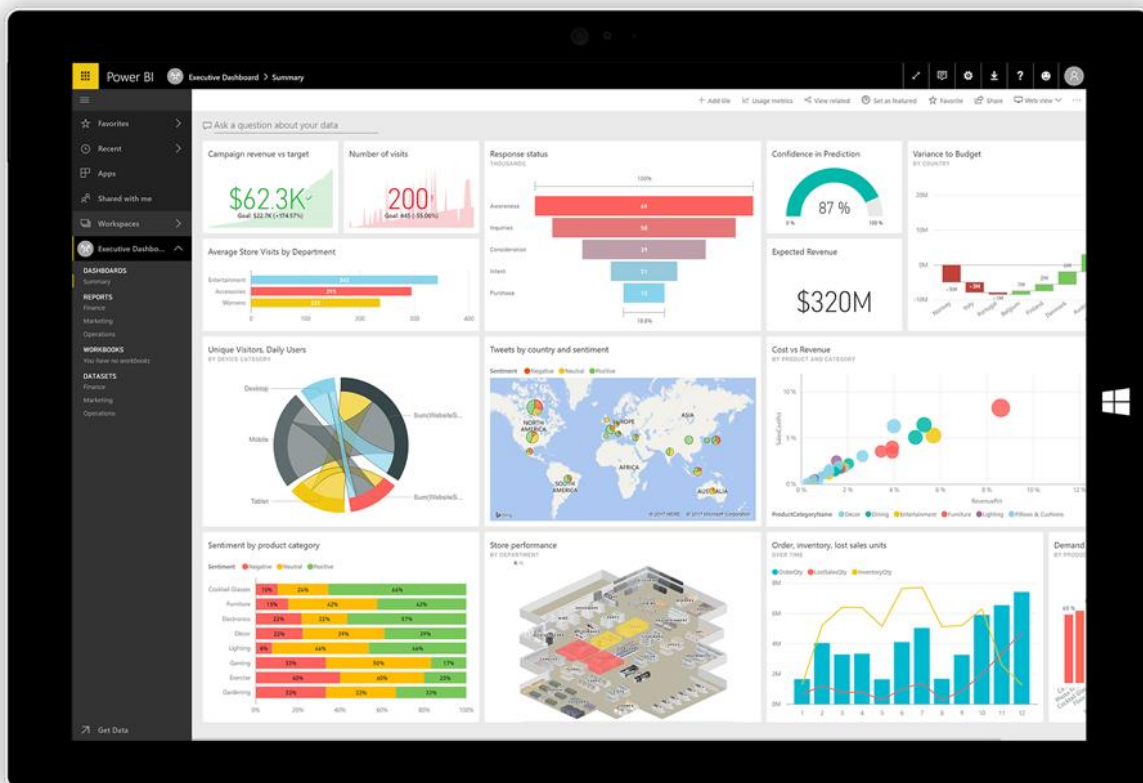

Naturally, there are some feature limitations with the free Power BI Desktop that give further incentive to upgrade.

- Can't share created reports with non-Power BI Pro users
- No App Workspaces
- No API embedding
- No email subscriptions

- No peer-to-peer-sharing
- No support to analyse in Excel within Power BI Desktop

To be very clear: All of Power BI's basic features - cleaning and preparing data, connectors to data sources, custom reports, visualisations and exports to Microsoft apps are included in Power BI Desktop. Thus, whatever core functionality or features are available in Power BI Desktop are also standard in the higher-tier, paid versions.

## What is Power BI Pro?

Power BI Pro is the full version of Power BI, complete with the ability to use Power BI for both building dashboards and reports and unlimited viewing, sharing and consumption of your created reports (and reports shared by others) - the latter not possible with Power BI Desktop.

A breakdown of Power BI Pro's differences against Power BI Desktop:

- Ability to embed Power BI visuals into apps (PowerApps, SharePoint, Teams, etc)
- Native integration with other Microsoft solutions (Azure Data Services)
- Share datasets, dashboards and reports with other Power BI Pro users
- Can create App Workspaces and peer-to-peer sharing

Power BI Pro is licensed by individual user. For example, if your organisation has 20 people that need to full capabilities of self-service BI to create dashboards and reports,

you need 20 licenses of Power BI Pro, which gives these users full access to creation of reports and unlimited consumption (viewing) of any created content.

If you have a lot of users, Power BI Pro can obviously become quite expensive - but there's a better option if you have more users that need to consume reports than use Power BI for creating reports, which we detail below.

## What is Power BI Premium?

Power BI Premium is the most expensive tier of Power BI currently available and very distinct from the other two versions available on the market.

On top of the features and functionality standard to all versions of the service, users of Power BI Premium get:

- Increased data capacity limits and maximum performance
- Access to one API surface
- Ability to embed Power BI visuals into apps (PowerApps, SharePoint, Teams, etc)
- Larger storage sizes for extended deployments
- Geo distribution, higher refresh rates, isolation, pin to memory, read-only replicas
- Power BI Report Server

Power BI Premium differs from the free version and Power BI pro in its licensing model, which only suits a specific size and type of organisation and business scenario. You can purchase Premium in a range of capacity sizes that offer different numbers of memory and virtual cores that can scale as your data analysis requirements change.

With Power BI Premium, you are licensing capacity for your datasets, dashboards and reports, not just licensing all users of that content. In other words, you're not buying individual licenses, you're buying them in bulk to allow a large number of your users to use Power BI to view reports. All of your content is stored in Premium and can then be viewed by as many users in your organisation as you want, without additional per-user costs.

## Power BI Pro vs Power BI Premium key differences

Power BI Premium and Power BI Pro's differences mostly come down to aforementioned performance - if you're using Premium, you will actually need to have a large number of Pro licenses to compliment it.

The reason is simple: Power BI Premium only lets your users consume Power BI content rather than actually create reports. Consume refers to viewing Power BI custom-built dashboards and reports published on the Web, Power BI mobile apps, or reports embedded in internally-developed applications ([such as PowerApps](#)) and portals.

It's important to understand that even with a Power BI Premium license, your organisation's self-service BI users (i.e. the guys actually building reports and not just consuming them using Power BI) still require their own Power BI Pro licenses to create

reports for consumption for the rest of your users (those just viewing) covered by Premium.

By having a Premium license, your smaller number of Pro users unlock more capacity (larger storage sizes) and higher limits (refresh rates, isolation, etc)

## The product breakdown:

	Power BI Desktop	Power BI Pro	Power BI Premium
Included with Office 365 E5:		✓	
Licensed per:	User	User	Cloud Compute
Data Refresh Rate:	8/day	8/day	48/day
Unrestricted Report Sharing:	✓	✓	✓
Export to CSV, XLS, PDF & PPTX:		✓	✓
Embed Visuals into Apps (Teams, SharePoint, etc.):		✓	✓
Storage Limit:	10GB	10GB	100TB
Fixed paginated layout for printing:			✓

## Price:

Power BI Desktop	Power BI Pro	Power BI Premium
Free	\$9.99 <small>Monthly price per user</small>	\$4,995 <small>Monthly price per dedicated cloud compute and storage resource with annual subscription</small>

## Power Query Editor Screenshot

# Advanced Power Query Editor Screenshot

The screenshot displays the Advanced Power Query Editor interface. The main window shows the M code for a query named "Orders". The code defines the source as an Excel workbook, promotes headers, and transforms column types. A status bar at the bottom of the editor indicates "No syntax errors have been detected." A "Display Options" menu is open, showing options like "Display line numbers", "Render whitespace", "Display mini map", and "Enable word wrap". The background shows a preview of the data table with columns and rows.

```
1 let
2     Source = Excel.Workbook(File.Contents("D:\Neuron\Power BI and Tableau\Lecture-2\Store Sales Data.xlsx"), null, true),
3     Orders_Sheet = Source[[Item="Orders",Kind="Sheet"]][Data],
4     #"Promoted Headers" = Table.PromoteHeaders(Orders_Sheet, [PromoteAllScalars=true]),
5     #"Changed Type" = Table.TransformColumnTypes(#"Promoted Headers",{{{"Power Store Ltd", type any}, {"Column2", type text},
6     {"Column3", type any}, {"Column4", type any}, {"Column5", type any}, {"Column6", type any}, {"Column7", type text},
7     {"Column8", type text}, {"Column9", type text}, {"Column10", type text}, {"Column11", type text}, {"Column12", type text},
8     {"Column13", type text}, {"Column14", type any}, {"Column15", type text}, {"Column16", type text}, {"Column17", type text},
9     {"Column18", type any}, {"Column19", type any}, {"Column20", type any}, {"Column21", type any}, {"Column22", type any},
10    {"Column23", type any}, {"Column24", type any}}}}
11 in
12     #"Changed Type"
